What is Associative Memory? - Computer Notes

Associative memory: A type of computer memory from which items may be retrieved by matching some part of their content, rather than by specifying their address (hence also called associative storage or Content-addressable memory (CAM).) Associative memory is much slower than RAM, and is rarely encountered in mainstream computer designs.

[Neural Associative Memories - Cornell University](#)

[Neural Associative Memories](#) Neural associative memories (NAM) are neural network models consisting of neuron-like and synapse-like elements. At any given point in time the state of the neural network is given by the vector of neural activities, it is called the activity pattern. Neurons update their activity values based on the inputs they receive (over the synapses). In the simplest neural
