2L6 Biological Effects of Radiation Chemistry
There is a large difference in the magnitude of the biological effects of nonionizing radiation (for example, light and microwaves) and ionizing radiation, emissions energetic enough to knock electrons out of molecules (for example, and particles, rays, X-rays, and high-energy ultraviolet radiation).

NRC: Backgrounder on Biological Effects of Radiation

Biological Effects of Radiation We tend to think of the effects of radiation in terms of how it impacts living cells. For low levels of exposure, the biological effects are so small they may not be detected.

Biological Effects of Ionizing Radiation College Physics

The biological effects of ionizing radiation are due to two effects it has on cells: interference with cell reproduction, and destruction of cell function. A radiation dose unit called the rad is defined in terms of the ionizing energy deposited per kilogram of tissue:

Biological effects of ionizing radiation - WikiLectures

Biological effects of the same doses of ionizing radiation can differ greatly. These effects depend on the linear energy transfer and on the spatial distribution of a given dose. DNA molecules are the most critical cellular structures that can be affected by ionizing radiation.
