A Data Warehouse is a good solution for applications that are great for data entry but lacks in depth reporting and drilldown capabilities. A Data Warehouse could be used to bring several applications and/or data sources together.

[Building a Data Warehouse | Analytics](#)

A data mart is a subset of the data that is specific to individual department or users and includes only the data that is most relevant to their specific use cases. There can be multiple data marts, but they all pull from the same data warehouse to ensure that the information that is seen is the most up-to-date and accurate. Many times, in addition to marts, a data warehouse will have
