[What is a Computer Simulation? - Definition from Techopedia](#)

A computer simulation is the usage of a computer for the imitation of a real-world process or system. The dynamic responses of one system are represented by the behavior of another system, which is largely modeled on the former.

[Computer simulation - Wikipedia](#)

Computer simulation is the reproduction of the behavior of a system using a computer to simulate the outcomes of a mathematical model associated with said system. Since they allow to check the reliability of chosen mathematical models, computer simulations have become a useful tool for the mathematical modeling of many natural systems in physics (computational physics), astrophysics
