[Continuous functions form a vector space - Calculus](#)

A continuous function on I is a function on I that is continuous at all points on the interior of I and has the appropriate one-sided continuity at the boundary points (if they exist). The continuous functions on I form a real vector space $C(I, \mathbb{R})$, in the sense that the following hold:

The field is continuous if the component functions M, N, \dots

The field is continuous if the component functions $M, N,$ and P are each continuous. The field is differentiable if each component function is differentiable, the vector function $r(t), a \leq t \leq b$, then the region is always on the left as the point $r(t)$ traverses C . (See Figure 2.)
