DSLR Cameras. Short for digital single-lens reflex, DSLR cameras use a mirror behind the camera lens that directs light towards the viewfinder when you're composing a photo. The mirror quickly swings out of the way when you're taking a photo, allowing light to travel through the lens to the sensor, creating the photo you see on the display. DSLR cameras are a popular choice for

[The Ultimate Guide to Learning how to use Your first DSLR](#)

The camera will determine the exposure, yet you should have the option of changing either the aperture OR shutter speed (within the one mode) and the camera will change

the other to maintain the balanced exposure. It is a 'semi-automatic' way of shooting that gives a little more flexibility over the two individual priority modes.
