Differences Between Direct Vent and Power Vent Water Heaters

Direct Vent Water Heater. When using a direct vent water heater, water is heated by the heat of fuel combustion. A direct vent system typically results in lower water heating costs, because the exhaust gases are vented vertically, with no extra power required as is the case with the power vent water heater.

Direct Vent Gas Water Heater | GSW

Direct Vent Gas Water Heater. The heater must be installed near an outside-facing wall as it draws combustion air from outdoors using the included 90 coaxial vent pipe. The exhaust is vented outside without a blower meaning it operates silently. The GSW Direct Vent heater is ideal for tight installations where space is at a premium.

DIRECT VENT GAS MODELS. Direct Vent water heaters utilize a co-axial (pipe inside a pipe) vent pipe that takes air in from the outside (outer vent) and vents combustion gases directly back to the outside (outer vent). It is the perfect choice for situations with insufficient combustion air. No electricity required.

Power Direct Vent Gas Water Heater | GSW

Power Direct Vent Gas Water Heater. A Power Direct Vent heater is ideal when using inside air for combustion is not an option and a longer vent run is required, possibly as a result of the heater being in a smaller room that does not have a wall facing outdoors.

Direct Vent Water Heaters Ottawa - Climate Works

With a direct vent, no chimney is required but there is a vent on the outside wall that will bring air for combustion in the hot water heater, inside. There are some vents that require the hot water heater to be close to the outside wall, while other vents allow for the hot water heater to be located a farther distance away.

What You Need to Know About Venting a Hot Water Heater

With a direct-vent system, air for combustion is drawn from a vent pipe that runs through an exterior wall or the roof. Exhaust gasses are vented outdoors through a separate vent duct or through a separate chamber of the same pipe (this requires a double-wall vent duct). Direct-vent systems essentially "breathe" outdoor air, so they are not subject to the effects of backdrafting in the home. They also reduce the risk of accidental fires caused by flammable vapors around the water heater.
