[Stress fractures | Radiology Reference Article ...](#)

High-risk sites of stress fractures are locations at greatest risk of fracture propagation, displacement or non-union. These sites are under tensile stresses and have poor vascularity. These include: These sites are under tensile stresses and have poor vascularity.

[Pelvic Fractures - OrthoInfo - AAOS](#)

Unstable pelvic fractures sustained during high-energy incidents, such as car accidents, may result in significant complications, including severe bleeding, internal organ

damage, and infection. If these injuries are addressed successfully, the fracture usually heals well.

The Assessment of Fracture Risk - PubMed Central (PMC)

Osteoporosis is the most common metabolic bone disease, and it affects up to 40% of postmenopausal women 1. It is considered a silent disease because bone loss occurs without symptoms or signs, and approximately two-thirds of vertebral fractures are asymptomatic 2.

Bone fracture - Wikipedia

A bone fracture (sometimes abbreviated FRX or Fx, F x, or #) is a medical condition in which there is a partial or complete break in the continuity of the bone. In more severe cases, the bone may be broken into several pieces. A bone fracture may be the result of high force impact or stress, or a minimal trauma injury as a result of certain medical conditions that weaken the bones, such as
