Spatial comparison of PC-type geomagnetic micropulsations ...

Analog spectral analysis of geomagnetic micropulsations recorded simultaneously at pairs of stations differing in longitude and latitude indicates that the pulsations often have the same dominant periods at different stations.

TWO-DIMENSIONAL CALCULATIONS OF MAGNETIC MICROPULSATION

There are several types of geomagnetic noise that occur? The most dominant is the diurnal variations. Superimposed on this are smaller variations known as micropulsations and noise caused by local disturbances. Sudden eruptions on the sun sometimes cause large fluctuations in the field. Several studies of the various noises have been made (3).

10.17226/18481. The geomagnetic micropulsations category includes a large class of phenomena -- both magnetohydrodynamic waves and transient disturbances associated with variations in the geomagnetic field. Because the wave periods and wave-lengths are long, these phenomena are best observed from the Earth. However, the ATS

An investigation of polar substorms observed at Halley Bay, Antarctica: Creator: Boteler, David H. Date Issued: 1980: Description: Ground observations of magnetic and ionospheric substorms are reviewed, and the processes involved are explained. Then magnetic and absorption results from an auroral zone station, Halley Bay, are examined. Positive H bays occur in the evening sector between 16.00
