...

An unpredictable disease of the central nervous system, multiple sclerosis (MS) can range from relatively benign to somewhat disabling to devastating, as communication between the brain and other parts of the body is disrupted.

[Multiple Sclerosis: What is MS? Overview, Risk Factors ...](#)

Multiple sclerosis, or MS, is a long-lasting disease that can affect your brain, spinal cord, and the optic nerves in your eyes. It can cause problems with vision, balance, muscle control, and

[What is MS? MS Society of Canada](#)

Canada has one of the highest rates of multiple sclerosis (MS) in the world, with an estimated 1 in every 385 Canadians living with the disease. While it is most often diagnosed in young adults aged 20 to 49, younger children and older adults are also diagnosed with the disease.

[Multiple Sclerosis - Canada.ca](#)

Multiple sclerosis (MS) is a disease of the central nervous system. The immune system attacks myelin (protective covering of the nerves) in the brain, spinal cord, and optic nerves, which disrupts communication between the central nervous system and the rest of the body.

[Understanding Multiple Sclerosis: A Detailed Overview](#)

Multiple sclerosis is a chronic illness of the central nervous system. Certain aspects of MS remain a mystery, but there's also a wealth of information available. MS symptoms can change in

[What Is MS? : National Multiple Sclerosis Society](#)

Multiple sclerosis (MS) is an unpredictable, often disabling disease of the central nervous system that disrupts the flow of information within the brain, and between the brain and body. A detailed view of MS-related damage in the central nervous system that results in the varied and unpredictable

[Multiple sclerosis - Symptoms and causes - Mayo Clinic](#)

Multiple sclerosis (MS) is a potentially disabling disease of the brain and spinal cord (central nervous system). In MS, the immune system attacks the protective sheath (myelin) that covers nerve fibers and causes communication problems between your brain and the rest of your body.

[Multiple sclerosis - Wikipedia](#)

Multiple sclerosis (MS) is a demyelinating disease in which the insulating covers of nerve cells in the brain and spinal cord are damaged. This damage disrupts the ability

of parts of the nervous system to communicate, resulting in a range of signs and symptoms, including physical, mental, and sometimes psychiatric problems.

Multiple Sclerosis | MS | MedlinePlus

Multiple sclerosis (MS) is a nervous system disease that affects your brain and spinal cord. It damages the myelin sheath, the material that surrounds and protects your nerve cells. This damage slows down or blocks messages between your brain and your body, leading to the symptoms of MS. They can include

Multiple Sclerosis - WebMD - Better information. Better ...

Multiple sclerosis, or MS, is a long-lasting disease that can affect your brain, spinal cord, and the optic nerves in your eyes. It can cause problems with vision, balance, muscle control, and

What is multiple myeloma? - Canadian Cancer Society

Multiple myeloma is a cancer that starts in plasma cells. Plasma cells are a type of white blood cell that makes antibodies (also called immunoglobulins) to help the body fight infection. Plasma cells are a type of white blood cell that makes antibodies (also called immunoglobulins) to help the body fight infection.
