Once an ovule has been fertilised by the pollen, it develops into a seed, containing an embryo (a young root and shoot) and a food store that will allow the young plant to start to grow at a later stage of the life cycle.

Plant Life Cycle for Kids - BiologyWise

The life cycle of a plant begins with a seed the storehouse of all plant parts, including stem, roots, and leaves in their dormant form. Other than various parts of the plant, it also contains all nutrients required for the process of sprouting. A seed may lie in the soil dormant for a long time until it is exposed to favorable conditions required for plant growth, wherein there is ample
