condensed matter physics, pharmaceutical research and cultural heritage. What is synchrotron light? Synchrotron light (also known as synchrotron radiation) is electromagnetic radiation that is emitted when charged particles moving at close to the speed of light are forced to change direction by a magnetic field. Synchrotron light can be produced naturally by astronomical objects, such as the

### Condensed Matter Experiment | Bruce D. Gaulin | Facilities

In an x-ray or neutron scattering experiment, the pulsed magnet technique requires either time-resolved measurements (achievable at the high intensity synchrotron source, APS), or the statistical combination of many successive pulses (a technique being considered at some neutron sources).
