A perovskite is any material with the same type of crystal structure as calcium titanium oxide, known as the perovskite structure, or  $XIIA_2+VIB_4+X_2 \cdot 3$  with the oxygen in the edge centers. Perovskites take their name from the mineral, which was first discovered in the Ural mountains of Russia by Gustav Rose in 1839 and is named after Russian mineralogist L. A. Perovski. The general chemical formula for perovskite compounds is  $ABX_3$ , where 'A' and 'B' are two cations of very different sizes
