Modelling of hydrological rainfall-runoff processes is facilitated by the application of the systemtheoretical approach to linear, nonlinear and stochastic models. To this purpose, the variables involved in methods for determining areal precipitation and baseflow separation are discussed. Surface-water hydrology - Wikipedia

Surface-water hydrology is the sub-field of hydrology concerned with above-earth water, in contrast to groundwater hydrology that deals with water below the surface of the Earth.

Surface-water hydrology - Wikipedia

Modelled aspects include precipitation, the interception of rain water by vegetation or artificial structures, evaporation, the runoff function and the soil-surface system itself. [3] When surface water seeps into the ground above bedrock, it is categorized as groundwater . [4] and the rate at which this occurs determines baseflow needs for instream flow , as well as subsurface water levels in wells .
