Isolation of an Adeno Associated Virus From Sheep

Parvoviruses are relatively heat stable and are not inactivated by heating to 60 C for 30 minutes (5) although this treatment inactivates adenoviruses (10). To investigate if the haemagglutinating agent had the heat stability of parvo-

In the case of parvoviruses and other nonenveloped viruses, the target for vaccine development is the capsid protein. Epitope-mapping studies of the capsid proteins of CPV have been carried out either with recombinant strains of CPV and FPLV (20, 22, 23) or through more or less random analysis of a number of synthetic peptides and expression products of VP1 (30). A recent study with anti-CPVMabs

eukaryotic viruses include integration mechanisms for both parvoviruses and retroviruses. Chapter 16 deals with damage, repair, recombination, and restriction-modifications. This is very much a biochemist's view of these subjects. The author is careful to avoid speculative schemes. However, in at least two places the text would have been enlivened by their inclusion: there is an interesting
