Torque specs lug nuts | Page 2 | Tacoma World

But let's back up a little--lug nuts are torqued to specific values in order to achieve a desired clamping/retaining force to keep the wheel on. Tightening the lug nut does this by stretching the lug stud (within it's range of elasticity) to pull the wheel and hub against each other--at that point the wheel/hub are clamped together as intended and there is (per the design engineers's

Torque specs lug nuts | Tacoma World

Most likely the "correct" lug nut torque is 113 Nm as the engineers were working with metric values--which is 83.3445 lb ft, closer to 83 than 85--however manuals often publish more convenient values like the 85 lb ft (+1.99% vs the actual conversion) as an added 2% really doesn't matter.
