Iontophoretic transport across a multiple membrane system ...

Different from a homogenous membrane system, iontophoretic fluxes were observed to be related to the electrical resistance and thickness of both SP500 and SP1000 membranes in the multiple membrane system because diffusion is a major component in iontophoretic transport across the system (Tab. 4). According to the transport model, when the thickness of SP1000 (flux enhancing membrane) decreases

In addition to the very substantial progress that has been made in the area of transport of fluid and solutes across artificial model membranes in vitro and across simple symmetrical cell membranes, much has been learned from studies of transport phenomena in multi-membrane systems of higher complexity to be reviewed in this volume. It should be recalled that many of the fundamental Iontophoretic Transport Across a Multiple Membrane System
